1. What is UART?
Ans- UART (Universal Asynchronous Receiver Transmitter) is a serial communication protocol used to transmit and receive data byte by byte.

2. Why use circular buffer for UART?
Ans- It optimizes space and allows continuous data flow without memory shifting.

3. What happens when buffer is full?
Ans- New data is lost or should be managed until space is available.

4. Is UART synchronous or asynchronous?
Ans- UART is asynchronous communication.
